

📄 ⚠️ INDEPENDENT PROJECT - NOT affiliated with Tether Holdings Limited

Turbo USD Finance

Independent Multi-Chain
DeFi Ecosystem

Independent DeFi Ecosystem & Protocol on BSC and TRON

Who We Are & Our Vision

Turbo USD Finance is a DeFi protocol asset and should not be interpreted as a stablecoin, fiat representation, or replacement for any third-party token, regardless of naming conventions.

Turbo USD Finance is designed as a decentralized protocol asset used for internal settlement, liquidity utility, and DeFi integration across multiple blockchains. It is not marketed as a fiat-backed stablecoin or a substitute for any third-party stablecoin. Its design focuses on DeFi interoperability, ecosystem utility, and developer adoption.

We are an independent, early-stage DeFi project building toward a fully-backed ecosystem on TRON and BNB Smart Chain. We are NOT affiliated with Tether Holdings Limited.

1

Independent Protocol

Separate contracts, team, and treasury. The "USDT" symbol on BSC is a technical identifier for ecosystem interoperability, not an affiliation claim

2

Current Status

Ownership renounced, liquidity locked, trading live on PancakeSwap. Building toward reserve backing through investment

3

DeFi Utility Focus

Designed for internal settlement, liquidity utility, and DeFi integration. This is a protocol asset, not a stablecoin or fiat representation

4

Transparency First

Doxxed founder, verified contracts, public documentation. Audit scheduled Q2 2026. Everything verifiable on-chain

What Turbo USD Finance Is (And Isn't)

Clear positioning to eliminate confusion and satisfy compliance requirements

What We ARE:

Decentralized Protocol Asset

- Used for internal settlement and liquidity utility
- DeFi integration across BSC and TRON
- Ecosystem interoperability focus
- Developer adoption and building

Independent DeFi Project

- Separate governance, treasury, and mechanics
- Community-owned (ownership renounced)
- Building toward reserve backing
- Transparent development roadmap

Multi-Chain Utility Token

- Native on BSC and TRON
- Trading and transfer utility
- DeFi ecosystem participation
- Cross-chain infrastructure (planned)

What We ARE NOT:

NOT a Fiat-Backed Stablecoin (Yet)

- Treasury currently building
- No guaranteed price peg
- Not marketed as substitute for USDT/USDC
- Experimental protocol asset

NOT Affiliated with Tether

- Completely separate entity
- Different team, contracts, treasury
- No endorsement or partnership
- Independent operation

NOT Guaranteed to Maintain \$1.00

- Price subject to market forces
- No backing until reserves built
- Volatility expected
- DYOR required

The "USDT" symbol on BSC is a technical identifier for ecosystem interoperability, not a claim of equivalence, affiliation, or endorsement with any external stablecoin issuer.

Turbo USD Finance operates as an independent DeFi protocol asset focused on utility, settlement, and ecosystem development.

Users must perform independent due diligence and understand that this is an experimental protocol with no guaranteed outcomes.

About the "USDT" Symbol on BSC

We understand this causes confusion. Here's the complete explanation:

On-Chain Metadata Clarification

On BNB Smart Chain, the deployed BEP-20 contract uses the technical identifier USDT due to historical compatibility design; this is a technical identifier and not an indication of affiliation, endorsement, or equivalence with the official Tether USDT token or ecosystem.

The Turbo USD Finance token operates under its own governance, treasury, and reserve mechanics. This identity naming choice is for ecosystem interoperability and does not represent endorsement by any external stablecoin issuer.

Technical Identifier, No Affiliation

The "USDT" symbol was selected as a technical identifier for a USD-pegged token within the Turbo USD Finance ecosystem. This selection **does not imply any affiliation, endorsement, or formal connection** with Tether Holdings Limited or its associated entities.

Operational Independence

Turbo USD Finance operates with complete autonomy. This includes:

- Distinct smart contracts.
- An independent team and founder.
- Our own developing treasury.
- A unique governance structure.
- A separate strategic roadmap and vision.

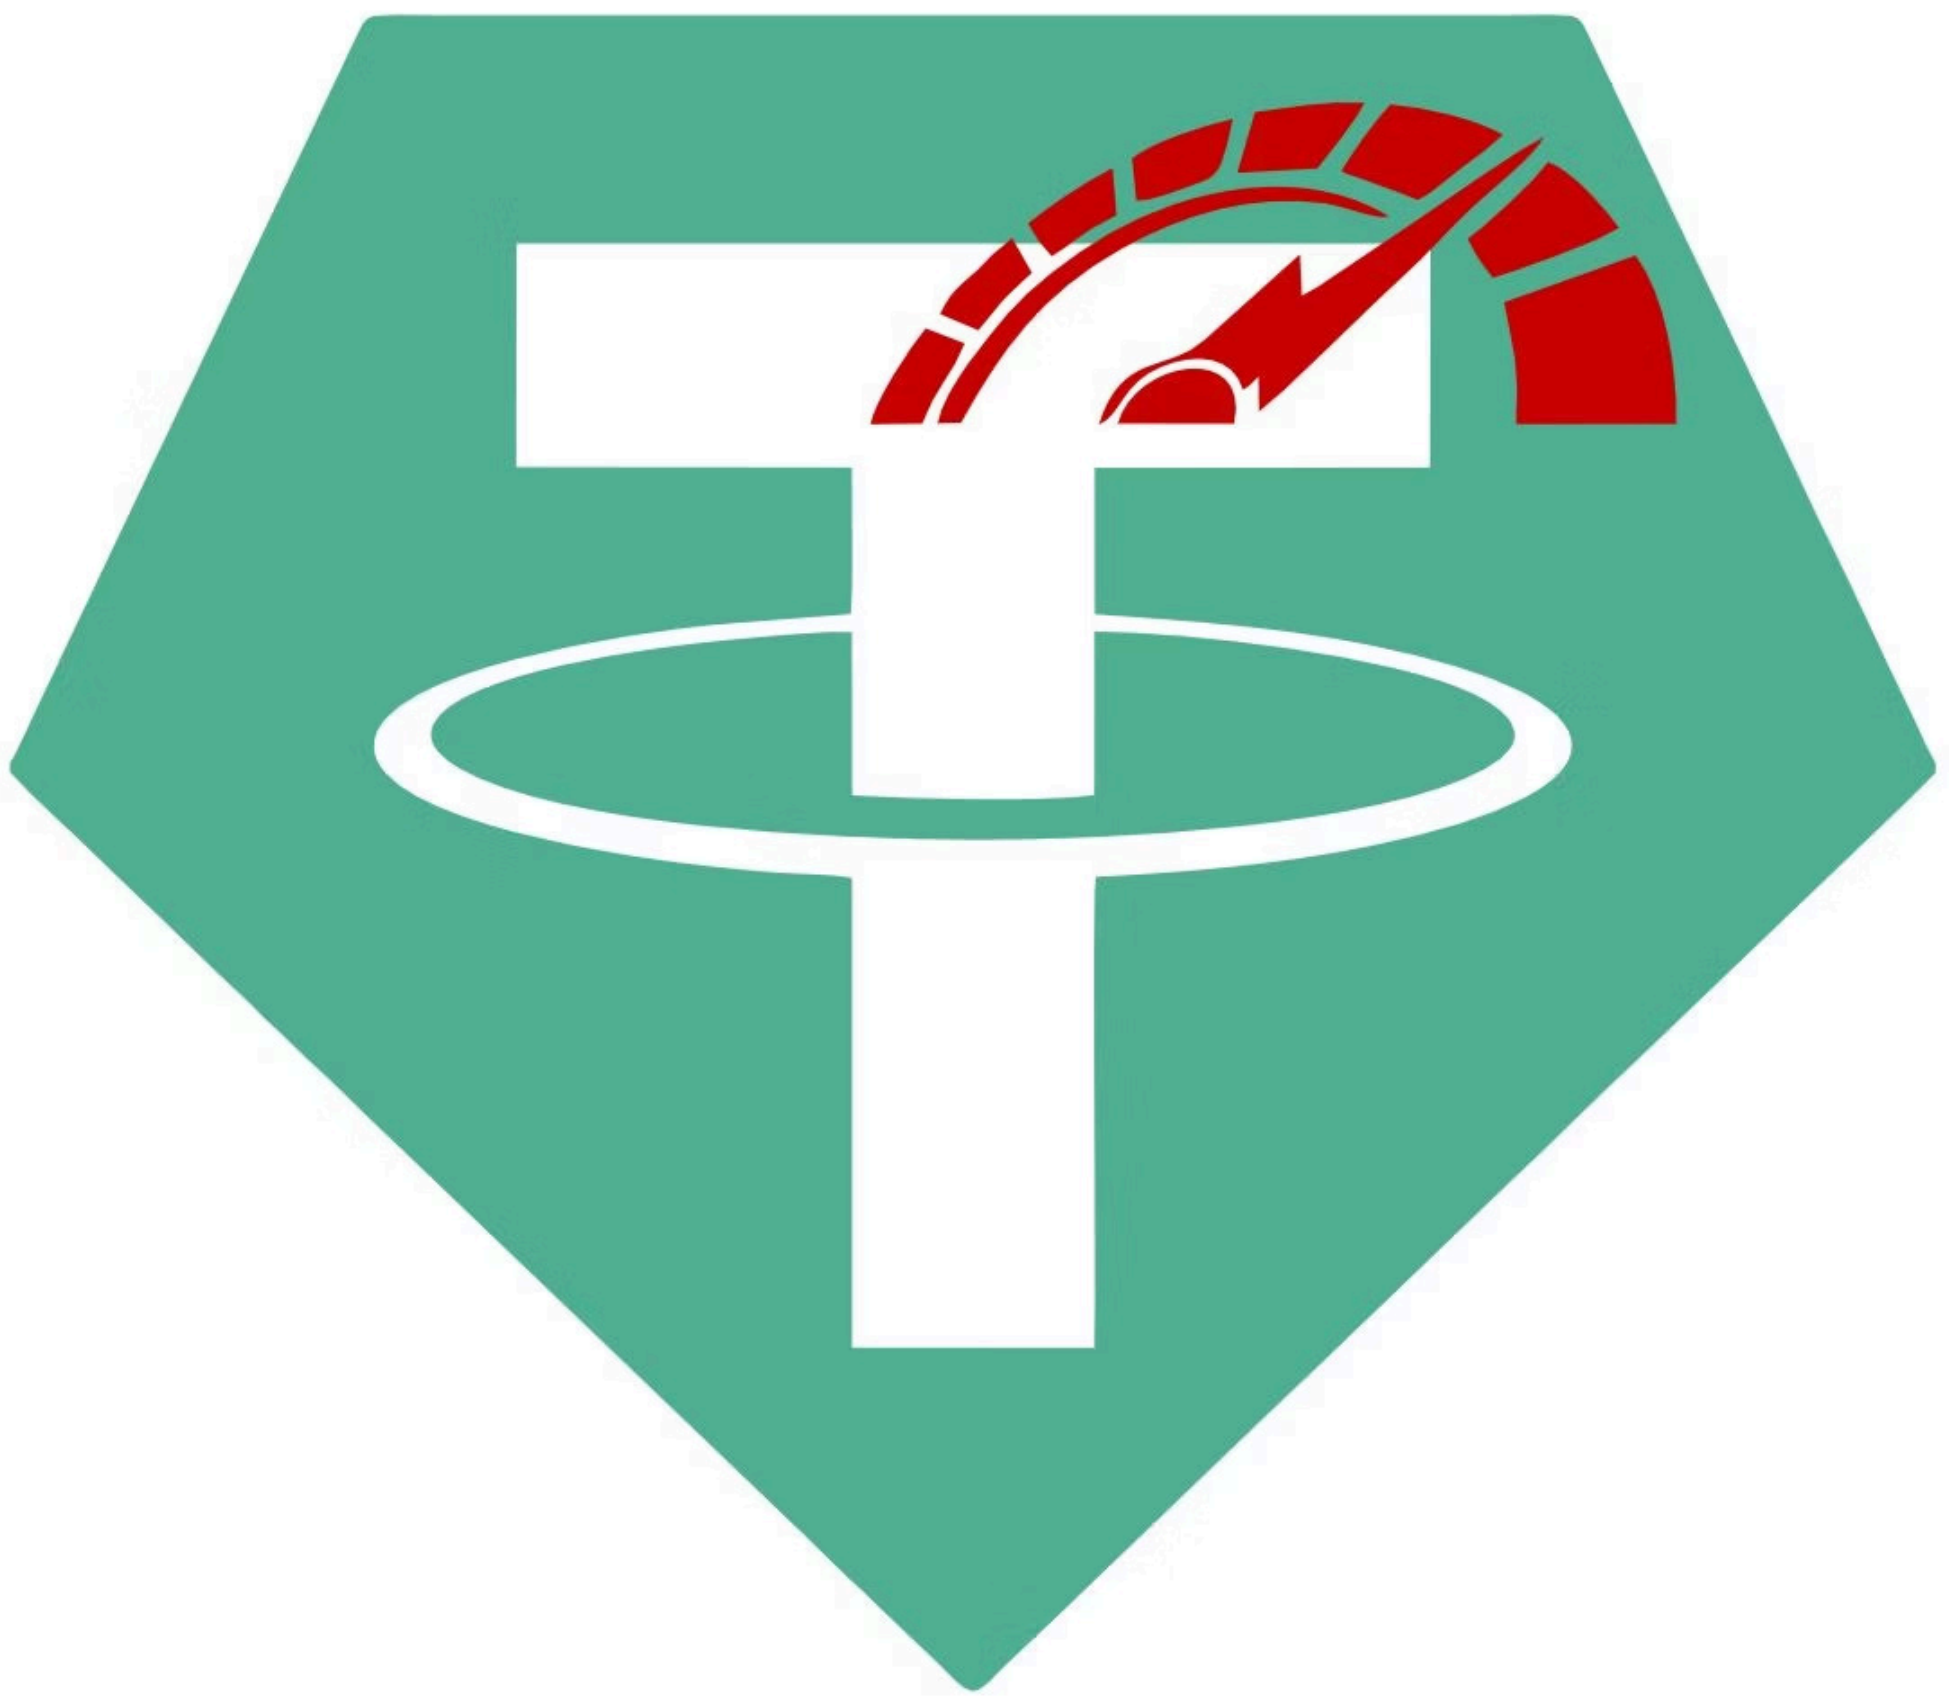

Transparency Regarding Platform Flags

We acknowledge that platforms like BSC Scan may flag our project due to the symbol similarity. We are fully transparent: Turbo USD Finance is an independent project and is **not Tether**. We are committed to clarity and providing verifiable on-chain data to confirm our distinct identity.

Verify Our Independence:

- ✓ Different contract addresses
- ✓ Different team (NenzyBrown, not Tether team)
- ✓ Different treasury wallets
- ✓ Ownership renounced (Tether's is not)
- ✓ Full disclosure on our website: turbousd.io/independence

We chose transparency over redeployment, and our community is well-informed of our distinct identity.

BRAND IDENTITY

Our Visual Identity & Brand Standards

Clear, professional branding that distinguishes us from any other project

Official Brand Assets:

Logo & Visual Identity:

- Turbo USD Finance official logo (distinct design)
- Color scheme: Electric blue (#00FFFF) & dark theme
- Typography: Modern, tech-forward
- Symbol: ₮ (Tenge symbol) as our unique identifier
- Never uses Tether's green or their logo style

Official Naming Convention:

- Full Name: Turbo USD Finance
- Short Name: TurboUSD or Turbo Finance
- Ticker Symbols: USDT (BSC) / TURBO (TRON)
- Website: turbousd.io (NOT .com or any Tether domain)
- Social Handle: @TurboUSDtron

Brand Asset Package Available:

High-resolution logos, color codes, usage guidelines, and platform integration specs available for listing partners.

Download: turbousd.io/brand-assets

Contact: support@turbousd.io

Brand Differentiation:

Visual Distinctions from Tether:

- ✓ Completely different logo design
- ✓ Different color palette (cyan vs. green)
- ✓ Different website design and UX
- ✓ Different social media presence
- ✓ Different documentation style
- ✓ Different community channels

Platform Display Guidelines:

For exchanges, explorers, and wallets:

- Always display our logo (not Tether's)
- Show full name "Turbo USD Finance"
- Link to turbousd.io for verification
- Display our social channels
- Show our unique branding

Why Platforms Should List Turbo USD Finance

We bring value to exchanges, explorers, and wallets - not risk

1

Growing Community & Volume

- 1000+ holders across BSC & TRON
- Active trading on PancakeSwap
- Engaged Telegram community (growing)
- Organic growth without paid promotion
- Real users, real transactions, real value

2

Fully Decentralized & Safe

- Ownership permanently renounced (0x000...dEaD)
- Liquidity locked (rug-pull impossible)
- No admin controls or backdoors
- Open source, verified contracts
- Zero risk of developer manipulation

3

Transparent & Compliant

- Doxxed founder (LinkedIn verified)
- Public documentation and roadmap
- Clear disclaimers about independence
- Audit scheduled Q2 2026
- Proactive about regulatory compliance

4

Multi-Chain Presence

- Native on both BSC and TRON
- Cross-chain liquidity opportunity
- Expanding to more networks
- Bridge infrastructure planned
- Interoperability focus

5

Long-Term Vision

- Not a pump-and-dump meme coin
- Building real DeFi infrastructure
- Seeking institutional funding
- Professional development roadmap
- Sustainable growth model

6

Platform Benefits

- Increased trading volume and fees
- Attracts DeFi-focused users
- Differentiated offering (multi-chain DeFi protocol)
- Community brings network effects
- Early listing = competitive advantage

What We Provide to Listing Partners:

- ✓ Professional brand assets and logos
- ✓ Marketing support and co-promotion
- ✓ Technical integration assistance
- ✓ Community engagement and education
- ✓ Regular updates and transparency reports
- ✓ Direct communication channel

We're not asking for a favor - we're offering a partnership opportunity.

Platform Listing Submission Package

Everything you need to list Turbo USD Finance - ready for immediate integration

01

Project Information

- Name: Turbo USD Finance
- Ticker: USDT (BSC) / TURBO (TRON)
- Type: DeFi protocol asset for settlement and liquidity utility
- Launch Date: January 2026
- Status: Active trading, seeking funding

03

Brand Assets

- Logo: turbousd.io/logo.png (256x256 PNG)
- High-res package: turbousd.io/brand-assets
- Color: Electric cyan (#00FFFF)
- Symbol: ₪ (Tenge symbol)
- Style guide: Available on request

05

Founder KYC

- Name: NenzyBrown
- LinkedIn: linkedin.com/in/nenzybrown
- Verification: Available for video call
- Background: Full-stack blockchain developer
- Accountability: Fully doxxed and public

07

Community Metrics

- Holders: 1,000+ (BSC + TRON)
- Telegram: active members(growing)
- Trading: Live on PancakeSwap
- Volume: Growing organically
- Engagement: Active daily community

Fast Track Approval:

Why List Us Now?

- First-mover advantage (before major exchanges)
- Growing community ready to migrate
- Professional team and documentation
- Clear differentiation from competitors
- Marketing co-promotion opportunity

What We Provide:

- ✓ Announcement coordination
- ✓ Social media promotion to 1K+ holders
- ✓ Community education about your platform
- ✓ Technical integration support
- ✓ Ongoing communication and updates

Contact for Expedited Review:

Email: support@turbousd.io

Response Time: Within 24 hours

Available For: Video calls, additional documentation, technical questions

We're ready to integrate immediately upon approval.

02

Contract Details

- BSC: 0x0DD126CA9EAbA5A9c55B14dd71787F88594A64d5
- TRON: TLUvRRgLYMXxz4xAqg6c3FE5wy7tYZShgz
- Verified: BscScan & TronScan
- Open Source: GitHub available
- Ownership: Renounced (0x000...dEaD)

04

Official Channels

- Website: turbousd.io
- Telegram: @TurboUSDtron
- Twitter: @nenzybrown
- Documentation: turbousd.io/whitepaper
- Email: support@turbousd.io

06

Security & Compliance

- Liquidity: Locked via UNCX (until Jan 2027)
- Tokens: 495M locked via DxLock (until Feb 2027)
- Audit: Scheduled Q2 2026
- Legal: Independence declaration available
- Risk Disclosure: Comprehensive (see whitepaper)

08

Technical Integration

- Standard: ERC-20 (BSC) / TRC-20 (TRON)
- Decimals: 18
- Price Feed: Available via PancakeSwap
- API: Standard blockchain RPC
- Support: Technical team available

Clear Positioning & Transparency

We believe in honest communication about what we are building and what we offer to the DeFi community.

Clear Identity

We operate as an independent decentralized protocol asset for DeFi utility, settlement, and ecosystem interoperability. We are completely separate from any third-party stablecoin issuer.

Honest Communication

We clearly state what we are and what we are not. No misleading claims, no false promises. Our technical identifiers are for ecosystem compatibility, not affiliation claims.

Risk Transparency

We provide comprehensive risk disclosures. Users understand this is an experimental protocol with no guaranteed outcomes. Independent research (DYOR) is essential.

Regulatory Compliance

Our documentation meets platform compliance requirements while maintaining complete transparency about our development stage, funding status, and future goals.

Our commitment: Build with transparency, communicate with honesty, and grow sustainably. We're here for the long term.

Addressing the Confusion: Why We're Different

We understand there are concerns about our project being flagged as a potential fake token. Here's complete transparency about who we are and what we're building.

Symbol Confusion

The "USDT" symbol on BSC was set at deployment and is immutable. It's a functional identifier, NOT an affiliation with Tether.

Independent Operation

Completely separate contracts, team, treasury, and governance. No connection to Tether Holdings Limited.

Early Stage Reality

Treasury currently empty and seeking investment. We're transparent about being in funding phase.

Legitimate Project

Ownership renounced, liquidity locked, founder doxxed, contracts verified. Everything provable on-chain.

We're building in public with radical transparency. The \$16T tokenization opportunity is real - we're positioning to capture it as we grow.

Current Technical Infrastructure

Built on TRON & BSC with Decentralized Governance

Smart Contracts (Current)

- BSC Contract:
0x0DD126CA9EAbA5A9c55B14dd71787F88594A64d5
- TRON Contract:
TLUvRRgLYMXxz4xAqg6c3FE5wy7tYZShgz
- Ownership permanently renounced (0x000...dEaD)
- Verified on BscScan & TronScan
- Standard BEP-20/TRC-20 implementation
- Open source code published

Security Measures (Active)

- Liquidity locked via UNCX (until Jan 2027)
- 495M tokens locked via DxLock (until Feb 2027)
- No admin controls (fully decentralized)
- Trading live on PancakeSwap
- Listed on GeckoTerminal & DexScreener
- Third-party audit scheduled Q2 2026

Future Development (Planned)

- Treasury funding (seeking \$500K-\$2M)
- 1:1 USD reserve backing
- Professional security audit
- Multi-chain bridge infrastructure
- Yield generation products
- RWA tokenization platform

Phase 1 complete. Phase 2 (funding & audit) in progress.

The Vision: Complete DeFi Ecosystem

Current Foundation → Future Infrastructure

TurboUSD Finance is building a comprehensive DeFi ecosystem that bridges traditional finance with blockchain innovation.

✓ LIVE: Multi-Chain Protocol Asset

Trading on BSC & TRON. DeFi utility and settlement token.

✓ LIVE: Decentralized Governance

Ownership renounced, community-owned protocol for transparent decision-making.

✓ LIVE: Liquidity Infrastructure

PancakeSwap integration and UNCX/DxLock-locked liquidity for trading stability.

⌚ PLANNED: Yield Protocol

Institutional-grade yield generation through T-Bills, money market funds, and DeFi strategies (4-8% APY target).

⌚ PLANNED: Cross-Chain Bridge

Secure, audited bridges between BSC, TRON, and other leading blockchain networks.

⌚ PLANNED: RWA Tokenization

Platform for tokenizing real estate, bonds, commodities, and private credit onto the blockchain.

⌚ PLANNED: Payment Rails

B2B payment infrastructure for cross-border settlements and treasury management leveraging blockchain.

⌚ PLANNED: Developer SDK

Comprehensive APIs and tools for building innovative applications on the TurboUSD infrastructure.

✓ = Currently Live | ⌚ = Post-Funding Development

Token Economics & Utility Model

Current Token Details

- Total Supply: 1.1 Billion tokens
- BSC: 2B tokens (USDT symbol)
- TRON: 100M tokens (TURBO symbol)
- Utility Focus: DeFi settlement and liquidity

Token Locks

- 495M tokens locked (DxLock until Feb 2027)
- Liquidity locked (UNCX until Jan 2027)
- Ownership renounced (fully decentralized)

Current Status

- Trading live on PancakeSwap
- No transaction fees (0.05% network gas only)
- Treasury: Building reserves (no guaranteed peg)

Future Economic Model (Post-Funding)

Planned Reserve Model:

- Exploring reserve-based economic models
- Subject to governance and funding
- Regulatory clarity required
- Transparent treasury operations

Reserve models subject to governance, funding, and regulatory clarity. No guaranteed price stability or peg.

Revenue Streams (Planned)

- Yield spread (2-3%)
- Cross-chain bridge fees (0.1%)
- RWA tokenization fees (0.5-1%)
- B2B payment processing (0.3%)

Governance Token (Future)

- Community governance implementation
- Protocol revenue sharing
- Staking rewards program

Current focus: Building DeFi utility and protocol infrastructure. Future: Full ecosystem with reserve-based models (subject to governance, funding, and regulatory clarity). This is a protocol asset, not a stablecoin or fiat representation.

Current Utility & Planned Applications

TurboUSD Finance provides immediate utility for users and is developing towards advanced financial applications.

DeFi Trading (LIVE NOW)

Trade on PancakeSwap with locked liquidity. Use as trading pair for swaps. Active DeFi community participation.

Liquidity Provision (LIVE NOW)

Provide liquidity on DEXs. Earn trading fees. Participate in DeFi ecosystem growth.

Fast Transfers (LIVE NOW)

Send value across BSC or TRON with minimal fees. Near-instant finality. Peer-to-peer utility.

Settlement Layer (FUTURE)

Once reserves are built: Internal settlement for DeFi protocols. Cross-chain value transfer infrastructure.

Ecosystem Utility (FUTURE)

Governance participation. Protocol fee discounts. Staking rewards. DeFi integration benefits.

Protocol Economic Model (FUTURE)

Exploring reserve-based models. Subject to governance, funding, and regulatory clarity. No guaranteed outcomes.

Phase 1 (Trading & Transfers) is live. Phase 2+ requires treasury funding. This is a DeFi utility asset, not a guaranteed stablecoin substitute.

Development Roadmap: Building Sustainably

Timeline depends on funding. We're building sustainably, not rushing. Transparency at every step.

Security Measures: Current & Planned

Security is not an afterthought—it's the foundation of everything we build

Current Security (ACTIVE)

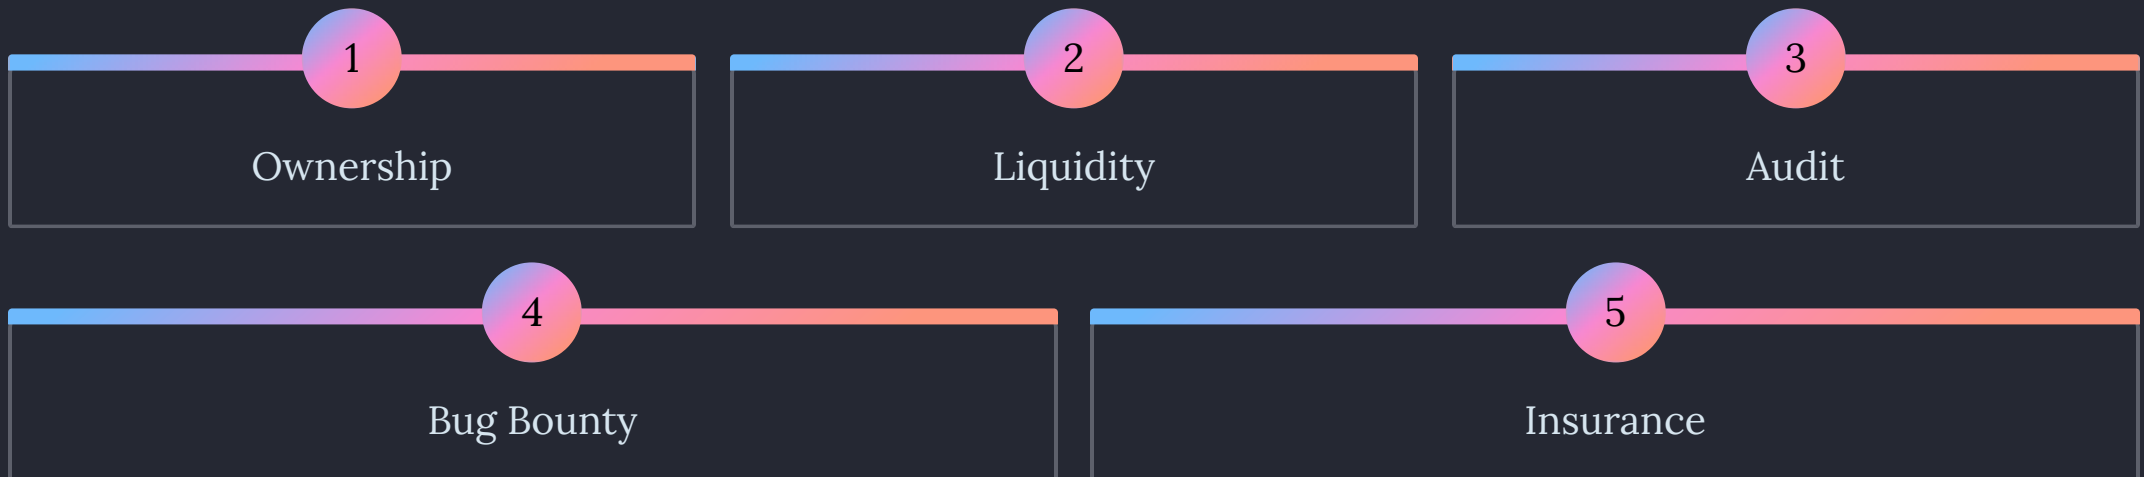

- Ownership permanently renounced
- Liquidity locked via UNCX
- 495M tokens locked via DxLock
- Contracts verified on BscScan & TronScan
- Open source code published
- No admin controls (fully decentralized)

Planned Security (Q2 2026)

- Third-party security audit scheduled
- Professional penetration testing
- Bug bounty program launch
- Continuous monitoring implementation
- Security dashboard development
- Incident response protocols

Future Infrastructure (Post-Funding)

- Multi-signature treasury management
- Hardware security modules (HSM)
- Insurance coverage for reserves
- SOC 2 Type II certification
- ISO 27001 compliance
- Regular security assessments

Security is our priority. Building proper infrastructure before scaling.

Radical Transparency: Building Trust

Unlike projects that hide their status, we're completely transparent about where we are and where we're going.

1

Verified Contracts

- All smart contracts verified on BscScan & TronScan
- Open source code publicly available
- Standard implementations

2

Doxxed Founder

- NenzuBrown (LinkedIn verified)
- Full accountability and transparency from day one
- Direct community engagement

3

On-Chain Verification

- Everything verifiable: ownership renounced, liquidity locked, token locks
- No hidden mechanisms or backdoors

4

Treasury Transparency

- Designated treasury wallets public
- Currently empty - seeking investment
- No false claims about reserves

5

Regular Updates

- Monthly transparency reports
- Active community communication via Telegram and Twitter
- Open about progress and challenges

6

Audit Commitment

- Third-party security audit scheduled Q2 2026
- Will publish full results publicly
- No shortcuts on security

Team & Current Partnerships

Leadership

Founder & Lead Developer: NenzyBrown

- Doxxed and LinkedIn verified
- Full-stack blockchain developer
- DeFi protocol expertise
- Smart contract development
- Community-focused leadership

Current Team

- 1 core developer (founder)
- Community moderators (volunteers)
- Growing contributor base
- Open to partnerships and advisors

Current Partnerships

Active Integrations:

- PancakeSwap (DEX trading)
- UNCX (liquidity locking)
- DxLock (token locking)
- GeckoTerminal (tracking)
- DexScreener (analytics)

Seeking Partnerships:

- Security auditors (Q2 2026)
- Legal counsel (regulatory compliance)
- Marketing agencies
- Exchange listings
- Strategic investors
- Technical advisors

Small team, big vision. We're actively seeking partners, advisors, and investors to help us scale. Contact: support@turbousd.io

COMPETITIVE ADVANTAGE

Our Unique Position in the Market

Fully Decentralized from Day One

Unlike most digital assets with centralized control, we renounced ownership immediately. No admin can pause, mint, or control the protocol. True decentralization.

Transparent About Early Stage

We don't pretend to have what we don't. Treasury is empty and we're seeking funding. This honesty builds trust that lasts.

Multi-Chain Native

Built on both TRON and BSC from launch. Not a bridge or wrapper - native implementations on both chains with unified vision.

Community-Owned Vision

No VC control, no insider allocations. The community owns the protocol. Future governance will be truly decentralized.

What We're Building Toward

- Reserve-based economic models (subject to governance and funding)
- Professional security audits
- Institutional-grade infrastructure
- Full DeFi ecosystem
- RWA tokenization platform

We're not competing with USDT or USDC today. We're building the foundation to compete tomorrow. Sustainable growth over hype.

The Opportunity: Why Now?

\$280B

Current DeFi settlement market opportunity

\$16T

Tokenized RWA market by 2030 (long-term vision)

\$800B

Annual remittance market (future application)

85%

Stablecoin adoption accelerating YoY

The DeFi protocol and tokenization markets are massive and growing. We're building sustainable infrastructure for the long term.

1

Foundation & Community

Establish trading presence

Build community trust

Secure seed funding

Target: \$1-5M market cap

2

Reserve Building

2026

Develop reserve-based economic model

Complete security audit

Expand exchange listings

Target: \$10-50M market cap

3

Ecosystem Launch

2027

Implement reserve-based protocol economics

Launch yield products

Begin RWA platform

Target: \$100M-500M market cap

4

Scale & Compete

2028+

Multi-currency expansion

Institutional adoption

Full ecosystem operational

Target: \$1B+ market cap

Realistic timeline. Sustainable growth. No shortcuts. We're building for the long term.

Risk Disclosure: What You Must Understand

Prospective users should understand these critical risks before participating:

- 1 Experimental Protocol Risk**
Turbo USD Finance is experimental and not guaranteed to maintain any price target. This is a DeFi utility asset, not a guaranteed stablecoin.
- 2 No Reserve Backing (Currently)**
Treasury wallets are designated but empty. We're seeking investment to build reserves. The token's contract name/symbol does not imply peg or backing.
- 3 Audit Pending**
Third-party security audit scheduled for Q2 2026 but not yet completed. Users must perform independent due diligence (DYOR).
- 4 Market Volatility**
Token price is subject to market forces. No guarantee of \$1.00 peg until reserves are established and maintained. Expect significant volatility.
- 5 Regulatory Uncertainty**
Stablecoin regulations are evolving globally. Future regulatory changes could impact operations or require protocol modifications.
- 6 Liquidity & Trading Risk**
While liquidity is locked (rug-pull impossible), trading volume may be limited. Large trades could experience slippage.

Current Protections:

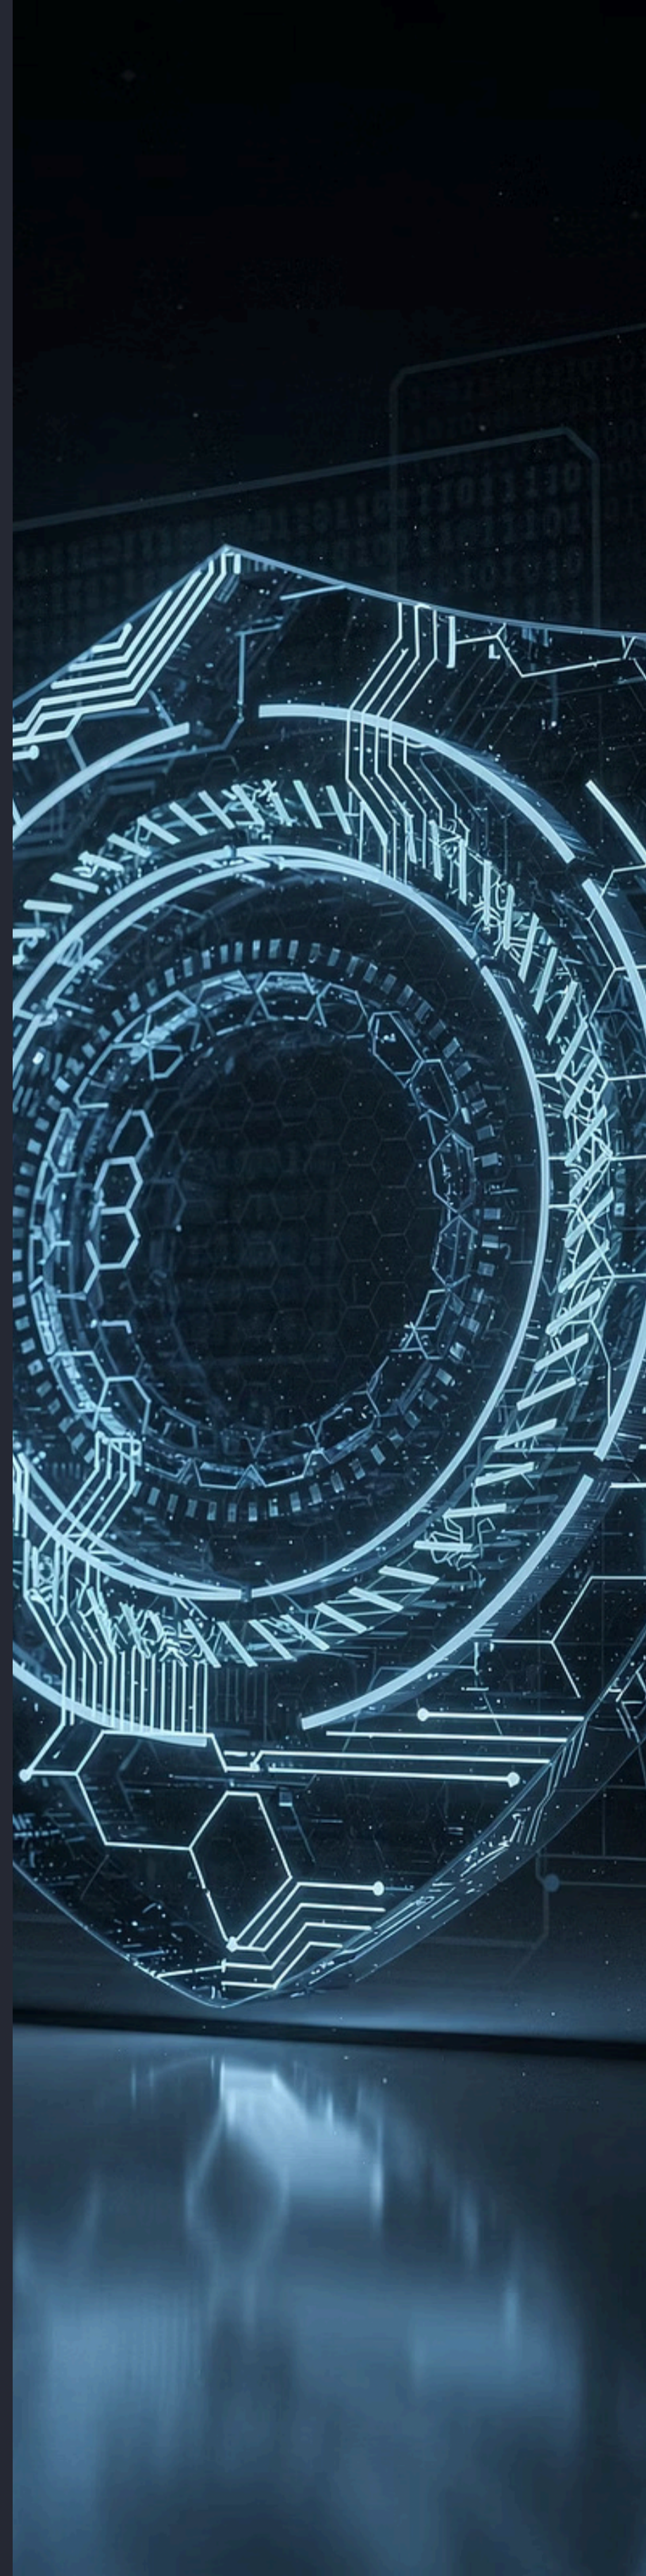

- Ownership renounced (no admin control)
- Liquidity locked (rug-pull impossible)
- Token locks in place (transparency)
- Contracts verified (open source)
- Founder doxxed (accountability)

Important: This is NOT a substitute for any third-party stablecoin. Users must conduct independent research and understand all risks.

Future Protections (Post-Funding):

- Professional security audit
- Reserve attestation
- Insurance coverage
- Regulatory compliance
- Multi-signature treasury

⚠️ **HIGH RISK - EARLY STAGE PROJECT.** Only invest what you can afford to lose.
This is not financial advice. DYOR.

Get Involved: Multiple Ways to Participate

For Traders & Community:

Trade Now:

- PancakeSwap (BSC): Swap BNB for TurboUSD
- Track on GeckoTerminal & DexScreener
